

Other useful information to include with your grant application

The Sitech Systems NZ Ltd funding assistance templates provide you with information about the product that you wish to purchase and the company that you wish to purchase it from. However you may want to include additional information relating to your school and the particular use your school intends for the equipment. Here are some ideas for content that may strengthen your application:

What need is the equipment filling?

- In the curriculum: for example helping with reading, giving supporting statistics when possible.
- Who will be using the equipment: explain how many students / classrooms / members of the community may benefit from the purchase.

What are the long term and short term goals?

- Include any measurable goals that you may have e.g. x number of entries into the science fair / x % improvement in achievement at literacy
- Give details of how this will be evaluated

Who will be involved and what will they bring to the project?

- Include short bios of staff who will be leading / using the purchases and how their skills will ensure the successful integration of the technology

Budget

Trusts generally ask to see some financial information plus a number of quotes. In addition you may wish to provide information on how the purchase will be maintained over time e.g. if the package includes a data projector, how do you intend to provide lamps. Also detail any other equipment that you have already purchased or intend to purchase to support the use of this item, thereby showing your financial commitment to the project.
