IP Audio Dispatch Console

ZYCOO IP Audio Dispatch Console is a multi-platform (Windows, MacOS and Linux) application dedicated for ZYCOO IP Audio Solution dispatch users.

With the IP Audio Dispatch Console, dispatch users can broadcast background music, make live SIP paging, create scheduled paging tasks, manage audio conference calls, initiate emergency broadcast, monitor IP audio endpoints status and more. It is suitable for public safety, smart city, secure community, industry, transportation, health and more application scenarios.

Feature Highlights

Real-time Device Status
ZYCOO IP Audio Dispatch Console supports real-time status monitoring of all ZYCOO IP Audio devices, and it also supports device fault notification.

Triggered Paging Tasks
Immediate triggered, timetable triggered and number triggered paging tasks can be created from the IP Audio Dispatch Console. Audio sources can be music playlist, TTS (Text to Speech) audio, pre-recorded messages, alarm sounds, etc.

Pre-recorded Message Paging
While creating triggered broadcast task, users can use the IP Audio Dispatch Console to do the recording directly. The recorded message can be reviewed and re-recorded until qualified.

Text-to-Speech (TTS) Paging
ZYCOO IP Audio Center has integrated with Google TTS engine, from within the IP Audio Dispatch Console, users can convert multiple language of text to speech and the converted audio can be used for creating triggered paging tasks.

Mp3 Music File Management
By using the IP Audio Dispatch Console, users can manage the music collection, and the customized playlist can be created for background music feature.

Music Player
The IP Audio Dispatch user can start an immediate background music task and can create a scheduled background music task. During the music streaming process, users can switch to previous/next song, pause music and change the playback order by a few mouse clicks.

Video Intercom
Except SIP voice intercom, video intercom is supported with ZYCOO SIP safety video intercom IV03, or by using the IA03 integration with external IP camera.

Click to Page
By selecting speakers or speaker groups and clicking on the Page button from within the IP Audio Dispatch Console, users can start an immediate paging for urgent or emergency situations.

Conference Management
ZYCOO IP Audio Center supports audio conferencing, and the conference can be managed by using the IP Audio Dispatch Console. Invite, mute/unmute, kick out participants options are supported.

Multi-user Login
Multiple IP Audio Dispatch Console users can be created on the IP Audio Center, and the users can be associated with different group/groups. So, each of the users can work separately, and multi-site IP Audio system can be achieved.
